ABOUT

Product-oriented full-stack engineer with frontend depth in React and TypeScript and a background in marketing. Progressed to primary implementation responsibility across six web applications and two React Native apps, delivering user-facing features, backend services and data workflows for learning platforms serving more than 50,000 registered users.

SKILLS

Frontend: React, React Native, TypeScript, JavaScript, Vue.js, HTML, CSS, Tailwind CSS, PrimeReact, Mantine UI, Recharts
Backend & data: Node.js, NestJS, Scala, MongoDB, PostgreSQL, Prisma, GraphQL, REST APIs, gRPC
Quality & delivery: Git, GitHub Actions, Docker, Jest, Vitest, React Testing Library
Applied AI: Google Gen AI SDK, Gemini function calling

EXPERIENCE

Full Stack Developer | The Key Technology GmbH · Berlin
07/2022 — 06/2026

RESULTS & IMPACT

- Progressed to primary implementation responsibility during the final two years for a suite of six web applications and two React Native apps, excluding Salesforce integrations, in a two-developer team.
- Prevented duplicate course identifiers across two Salesforce-connected learning platforms by challenging a database-local validation design and implementing a cross-platform gRPC uniqueness check.
- Identified certificate errors in regulated medical education, investigated their causes across historical course and submission data, and developed appropriate solutions to resolve them. Corrected the affected data in the databases and regenerated the certificates.
- Built course permissions, progression and certification workflows for a learning platform with more than 50,000 registered users and approximately 500 courses, including eligibility rules, blocked-course states, expiring-certificate views and an administrator self-service reset for users blocked after three failed attempts.
- Created assessment reporting for randomized question sets, mapping stored MongoDB answers back to course definitions to calculate answer exposure, correct responses and the most frequently selected wrong answers.
- Worked closely with designers to implement their Figma designs across an entire separate platform with approximately 500 courses. Rebuilt its production dashboard, independently aggregating course, progress and certification data into views sorted by type, progress and expiry.
- Reduced production dashboard load time from approximately seven seconds to two by improving MongoDB indexes. Added progressive skeleton states so each section rendered as soon as its independent query completed.
- Reduced the path from the course dashboard to assessment questions from approximately four clicks to two after reviewing the navigation flow with the client.

Frontend Web Developer Intern | Kooku Recruiting Partners · Berlin
12/2021 — 05/2022

RESULTS & IMPACT

- Built the chart views for an internal recruiting analytics application, visualizing recruiter contact volumes, candidates reaching final interview rounds and candidate drop-off by hiring stage.
- Translated designer-provided page designs into Vue.js and Tailwind CSS interfaces, including a client-filtering landing page with selectors and dropdowns; the delivered workflow and reporting views were used by the recruiting team.

PREVIOUS EXPERIENCE

Freelance Web Designer | Conjuro Digital Marketing Agency · Berlin — **09/2020 — 02/2021**
Built and maintained company websites with WordPress and CSS.

Reservation Manager | Plus Hostel and Hotel · Berlin — **02/2019 — 01/2020**
Managed the booking software and supported community management.

Restaurant Supervisor & Service Staff | Weinwirtschaft at Akademie der Künste · Berlin — **03/2015 — 01/2019**
Provided customer service, handled cash transactions, and supported event coordination.

PROJECTS

Personal Finance Tracker | https://github.com/lauratro/personal-finance-tracker
An authenticated React and NestJS application for tracking net worth and investments through yearly charts and a configurable dashboard whose widget layout persists for each user. Includes two predefined, user-scoped Gemini tools for financial analysis, frontend and backend tests, Docker Compose, and separate GitHub Actions CI workflows.
