ABOUT

Product-oriented full-stack engineer with frontend depth in React and TypeScript and a background in marketing. Progressed to primary implementation responsibility across six web applications and two React Native apps, delivering user-facing features, backend services and data workflows for learning platforms serving more than 50,000 registered users.

SKILLS

Frontend: React, React Native, TypeScript, JavaScript, Vue.js, HTML, CSS, Tailwind CSS, PrimeReact, Mantine UI
Backend & data: Scala, Play Framework, Node.js, NestJS, REST APIs, GraphQL, gRPC
Databases & ORM: MongoDB, PostgreSQL, Prisma
Testing: ScalaTest, Integration Testing, Jest, Vitest, React Testing Library
Architecture & Design: Dependency Injection (Guice), Plugin-based Architecture, Service Layer, Typed Domain Models
Development & CI/CD: Git, GitHub Actions, Docker
AI Integration: Google Gen AI SDK, Gemini Function Calling

EXPERIENCE

Full Stack Developer | The Key Technology GmbH · Berlin
07/2022 — 06/2026

- Owned features end-to-end as primary developer for six web applications and two React Native apps in a two-developer team, from clarifying requirements with the client through implementation, testing and release.
- Developed and maintained React Native applications, updated plugins, and independently managed Android app releases through Google Play Console.
- Built bidirectional Salesforce synchronization for users, modules and learning results across gRPC-connected Scala backend services, covering create, update and delete flows, including a cross-platform uniqueness check that prevented duplicate module identifiers.
- Developed integration tests across numerous Scala/Play backend services using ScalaTest, Guice and MongoDB, covering CRUD operations, business logic and error handling.
- Investigated and resolved certificate errors in regulated medical education, tracing root causes through historical course and submission data, correcting affected records and regenerating certificates.
- Built permissions, progression and certification workflows for a learning platform with 50,000+ users and ~500 courses, including eligibility rules, blocked-course states and expiring-certificate views.
- Implemented Figma designs for a separate platform with ~500 courses, including a rebuilt production dashboard; reduced its load time from ~7 s to 2 s by optimizing MongoDB indexes and adding progressive skeleton states.
- Created assessment reporting for randomized question sets, calculating answer exposure, correct responses and the most frequently selected wrong answers from stored MongoDB data.

Frontend Web Developer Intern | Kooku Recruiting Partners · Berlin
12/2021 — 05/2022

- Built the chart views for an internal recruiting analytics application, visualizing recruiter contact volumes, candidates reaching final interview rounds and candidate drop-off by hiring stage.
- Translated designer-provided page designs into Vue.js and Tailwind CSS interfaces, including a client-filtering landing page with selectors and dropdowns; the delivered workflow and reporting views were used by the recruiting team.

PREVIOUS EXPERIENCE

Freelance Web Designer | Conjuro Digital Marketing Agency · Berlin **09/2020 — 02/2021**
Built and maintained company websites with WordPress and CSS.

Reservation Manager | Plus Hostel and Hotel · Berlin **02/2019 — 01/2020**
Managed the booking software and supported community management.

Restaurant Supervisor & Service Staff | Weinwirtschaft (Akademie der Künste) · Berlin **03/2015 — 01/2019**
Provided customer service, handled cash transactions, and supported event coordination.

PROJECTS

Personal Finance Tracker | https://github.com/lauratro/personal-finance-tracker
An authenticated React and NestJS application using PostgreSQL and Prisma to track net worth and investments through yearly charts and a configurable dashboard whose widget layout persists for each user. Includes two predefined, user-scoped Gemini tools for financial analysis, frontend and backend tests, Docker Compose, and separate GitHub Actions CI workflows.
